

Firsts Fund helps early-career Filipinos invest for the big “firsts” five or more years away (taking Mom and Dad abroad, a first car, a first home, a first business) by owning, from ₱100, the companies around the world that run the systems everyday life depends on.

₱100 to start and per top-up	31 companies, 14 markets, held directly	1.50% a year, one fee layer (proposed)	5+ years goals only; shorter ones are routed elsewhere	₱1,363 a bad year on ₱5,000, shown before sign-up
---------------------------------	--	---	---	--

THE PROBLEM, AND THE ONE THAT ACTUALLY BINDS

At 22, your biggest asset is not money. It is forty years of future earnings: in pesos, tied to one economy, impossible to sell or hedge. A young Filipino is already all-in on the Philippines, without ever choosing it. Then look at what they can reach: savings and money-market funds that park the money, the local index that adds more of the same bet, or crypto. Two doors, **park or gamble**, and the middle, where a long horizon belongs, is empty.

Access is no longer the binding constraint, and we will not pretend it is. BPI cut its UITF minimum from ₱10,000 to ₱1,000 in 2023; some platforms start at ₱50. PSE accounts rose 50.1% in a year, and 26.5% now belong to 18-to-29-year-olds. The BSP measures financial literacy rising. Young Filipinos are arriving. What has not changed is the shape of the shelf they arrive at.

“Number one: you have to get global exposure... by diversifying some of that local exposure, you’re actually lowering your volatility.” — Joaquin Rossano U. Veluz, Sun Life Investment Management and Trust Co.

THE SECOND ERROR: THE RISK MODEL IS POINTED THE WRONG WAY

The retail risk framework is built to protect a **balance**, which is right for someone drawing money out. A young saver is doing the opposite: paying in every month. For them, an early fall is a discount, not damage.

The proof is arithmetic. We reordered the fund's own 60 monthly returns 20,000 times. Reordering keeps the total return exactly fixed; only the order changes. Correlation between the first half's return and final wealth:

Saver paying in ₱1,000 a month	−0.85
Retiree drawing ₱900 a month	+0.85

Same returns, mirror-image outcomes. Stated precisely, because it will be tested: if you end up in the same place, a saver would rather have gone down first. That is not a claim that falls are good; a fall that stays down hurts everyone.

WHAT THIS IMPLIES

The objective changes. Not “minimise the fall”, which is the retiree’s goal and costs a saver money, but **maximise the chance the investor is still contributing in year five**, because contributions decide where they end up. Everything in the Hook (page 2) and the Habit (page 3) serves that one number.

Every figure in pesos. A 22-year-old saving ₱1,000 a month does not think in percentages. A bad year like the worst in our 36-year history (−27%) on a ₱5,000 balance is **₱1,363**, about six weeks of saving. We print the peso figure beside the risk statistic, everywhere.

THE FUND IT PRODUCES

Firsts Fund: a proposed peso UITF that owns, directly, 31 listed companies around the world that run essential, hard-to-replace systems: power grids, water, digital networks, ports, airports, hospitals, and the equipment behind them. **₱100 to start. One fee. No feeder funds.**

Map	140 of the largest listed companies across 8 kinds of capacity
Check the fit	129 earn mostly from that capacity, with positive cash flow
Verify the merit	49 survive a debt stress test and compare well on value and quality
Position the risk	31 held, each adding a similar share of risk

Same published rules for every company, including the Philippines' ICTSI. Full process on page 5.

25.0% a year, today's holdings, 5 yrs (hindsight)	10.0% benchmark NFRA, same period
18.7% without chips & grid equipment	12.0% a year, 36-year industry history

Read honestly. The companies were picked in 2026 and priced backwards, so 25.0% is hindsight and an upper bound. The two right-hand numbers are the checks: it does not rest on chipmakers, and over 36 years the strategy grew about as fast as the world market (12.2%) with a worst year of −27%. Expect market-like growth, from businesses people cannot do without.

MEASURED AGAINST WHAT A YOUNG FILIPINO CAN BUY TODAY

Product	Structure; min.	What it still does not solve
Peso money market	Short-term debt; ₱50–1,000	Safe, but likely to trail inflation over five years.
Pag-IBIG MP2	Government savings; ₱500	Tax-free and never negative. Better for a first 3–5 years away, and our screen routes there.
Local equity index	PSEi names; ₱1,000	More of the one bet the investor cannot hedge.
Global fund-of-funds	Feeder structure; ₱1,000	Global, but with a second fee layer; you cannot see what you own.
Firsts Fund	31 direct shares; ₱100	Global capacity ownership, in pesos, one fee: the middle door.

A comparison of product shape, not of track records: ours is simulated, theirs are live.

Sources: PSE investor profile 2024 (via Manila Bulletin, 2025); BPI Wealth; BSP Consumer Finance and Inclusion Survey 2025. Sequence test: v4 holdings' monthly returns after costs, 20,000 random orderings; the correlation is arithmetic and does not depend on the level of returns. Industry-level history: Kenneth French Data Library, in pesos.

THE MESSAGE

Pondohan ang mga una mo.
Fund your firsts. There will always be a new first.

Retirement is the wrong hook for a 22-year-old, and not because they are short-termist. It is forty years away, belongs to a version of themselves they cannot picture, and every competing product already uses it. **A first is different: it has a name, a peso cost and a date.** It is the long-horizon goal a young Filipino can actually see, and it is why the account never closes: there is always another one.

Take Mom and Dad abroad	First car	First home
First business permit	First ₱100,000	First month you covered your own rent
First time you sent money home and still kept some	First laptop that is actually yours	First solo trip

Each is entered in the app as a peso amount and a month, which turns a feeling into a contribution plan.

WHY COMPETENCE, NOT FOMO: THREE INDEPENDENT LEGS

- 1 • Behaviour.** Susada (2025, n = 191) found perceived behavioural control, meaning literacy and self-efficacy, the only strong predictor of investment intention ($\beta = 0.502$, $p < .001$); peer and family pressure was not significant ($r = 0.09$). Caveat: one institution, intention not behaviour.
- 2 • The regulator's measurement.** BSP records literacy rising: 74% answer at least half the questions correctly, up from 69%. The gap is confidence and product shape, not knowledge.
- 3 • Where the appetite went.** Crypto awareness rose from 6% of adults to 20%, and 46% of Filipino crypto owners are 18–34. The appetite exists; it left for the only place that offered upside.

What this rules out: referral bounties, leaderboards, scarcity timers, streaks that punish a break. **What it keeps:** peer reach. A user can share their plan (the first, the cost, the date, the bad year in pesos), never a sign-up bonus. What travels is the calculator, which is also what builds competence.

THE COMMERCIAL QUESTION A ₱100 MINIMUM INVITES

₱100 at a 1.50% fee earns ₱1.50 a year. That pays for nothing, and we will not pretend otherwise. The economics are in **contribution flow**. An account paying ₱1,000 a month plus about ₱300 of Sukli puts in ₱78,000 over five years; at the median of our 36-year history (1.33× paid-in) that is about **₱104,000**, or roughly **₱1,600 a year** in fees per mature account. What decides whether this works is not how many accounts open but how many are still paying in month 60, the same number the fund's objective is written around.

Flagged, not buried: acquisition is near zero inside BPI's payroll base but not on wallet or campus channels; a direct multi-market fund carries custody, FX and audit costs a small account cannot bear, so the fund needs seed capital and a minimum size before opening; this is the shape of a cost model, not a costed one.

THE CAMPAIGN: WE SHOW YOU THE BAD YEAR FIRST

Every product here leads with the upside and discloses the downside at purchase. We reverse the order, and make the reversal the ad.

The opening asset is a **calculator on one screen**: name your first, enter the cost, pick the month (at least five years away). It returns the monthly amount, and, before any sign-up, **what a bad year would look like in pesos** on that balance.

Example. First home down payment, ₱300,000, June 2031.
→ about **₱5,357 a month** for 56 months (contributions only).
→ A bad year like our worst (–27%) when you have ₱100,000 saved: **–₱27,266**, on paper, while you keep paying in.

In a category selling optimism, the unclaimed position is **candour**. It is cheap to build, hard for a competitor to copy without abandoning its own creative, and does the one thing the evidence says moves this segment: it makes a beginner feel competent rather than excited. The 30-second ad ends on the same calculator.

THE LAUNCH: FOUR CHANNELS AND A DATE

Channel	Why it reaches this segment	Cost
BPI payroll	A first job usually comes with a payroll account. Offer triggers on the first salary credit, already KYC'd.	Near-zero
BPI app / e-Invest	BPI Wealth's existing digital onboarding for first-time investors. The rails are live.	Existing
GCash, Maya	94M and 50M users; 58% of adults use an e-wallet. The contribution rail for Sukli (page 3).	Revenue share
Campus, first jobs	Finance orgs and graduate onboarding at partner employers. Content is the calculator.	Low

The anchor: launch on the 13th month.
The most predictable cash event in the Filipino year: legally mandated, it lands in December, and it is money no young worker had budgeted. *“Your 13th month is the only money you were never budgeting. Give it a first.”* December opens the account; payday and Sukli keep it alive through the other eleven months.

FIVE FRICTIONS, AND WHAT REMOVES EACH

“I don't have enough”	₱100 to start and per top-up, and Sukli, which uses money you were not counting.
“I don't know what I'm buying”	31 named companies, each with the job it does. Not a fund of funds.
“I'll lose it”	The bad year in pesos, shown before sign-up rather than after.
“I'll need it back”	Firsts under five years are declined at goal-setting and routed to MP2 or a money-market fund.
“I stopped and never restarted”	Contributions on payday; a missed month prompts, it does not close.

Sources: Susada (2025); BSP Consumer Finance and Inclusion Survey 2025; Triple-A; company disclosures (GCash, Maya); BSP via the FinQuest 2026 primer (e-wallet use). Calculator example: 56 monthly contributions, no growth assumed. Fee economics use the 36-year industry-level median and are illustrative.

THE PLATFORM: THE ACCOUNT LIVES WITH BPI, THE MONEY MOVES IN THE WALLET

Why BPI holds the account. The investor is already onboarded and KYC'd, so opening is a confirmation, not an application. The salary lands here, so payday is a natural trigger. Suitability, statements and redemptions stay under one regulated roof, and the goal service needs two funds (growth and money market) that BPI already runs.

Why the wallet carries the money. A fund that wants a contribution every month should collect it where the taps already happen.

SUKLI: SMALL CHANGE, SWEEPED INTO YOUR FIRST

Sukli is the change you get back, a word every Filipino has used since childhood. Switch it on once and every discretionary GCash or Maya payment rounds up to the nearest ₱20; the difference is set aside and, at ₱100, swept into the fund. A ₱137 milk tea becomes ₱140 and ₱3 goes to your first. At about 30 wallet payments a month (our assumption) that is roughly ₱300, on top of payday.

Mechanic	Round up to the nearest ₱20, or 1–5% of spend (user-set)
Applies to	Discretionary spending only; never cash-in, send money, bills or remittances received
Guardrails	No round-up below a ₱500 wallet balance; monthly cap, default ₱1,000
While waiting	Held in a money-market fund (no idle cash); one net settlement a day to BPI Wealth
Turn off	One tap. No penalty

Why it fits this fund. A monthly contribution is a monthly decision, and every decision is a chance to stop. Sukli removes the decision without removing control: a commitment device, not a persuasion device. It never suggests or celebrates a purchase, and payday stays the main rail.

THE DESIGN RULES: WE OPTIMISE AGAINST ENGAGEMENT

Fintech apps chase daily users. A fund whose goal is that people keep contributing should do the opposite, because checking the balance comes before selling. Product rules, not aspirations:

- 1 No daily balance notification. Ever.
- 2 The headline number is **months funded**, not percentage change.
- 3 Notifications follow payday and your goal date, never the price.
- 4 Checking the balance is one tap further than adding to it.
- 5 The months-funded counter only goes up. A missed month pauses it; nothing resets.

Onboarding, four screens: confirm identity from the BPI record → name the first and its date (under five years is declined, with a reason, and routed to MP2 or money market) → see the monthly amount and the bad year in pesos → set the payday amount and switch on Sukli. **Monitoring shows three things:** months funded, pesos still to go, and the 31 companies you own by name.

THE LOOP

- 1 Name the first and the date. Under five years is declined, with a reason.
- 2 Fund it three ways: payday, Sukli, top-ups. Any one is enough.
- 3 See the risk in pesos before it happens.
- 4 Near the date, the goal service glides part of the balance into a money-market fund (proposed).
- 5 Then name the next one. The account reopens; it does not close.

THE REDEMPTION SCREEN: WHERE FUNDS LOSE PEOPLE**REDEEM · CONFIRM****₱4,138**

That is 14 months of contributions, and ₱21,860 short of your first: Siargao, June 2029.

One thing worth knowing first. You are down 9.4% and still paying in. For a saver, a weak stretch followed by recovery ends ahead of a strong start (correlation -0.85). Selling is the only version where that stops being true.

[Pause contributions for 3 months instead] · Withdraw ₱4,138

Pausing beats redeeming, and the screen should say so. Redemption stays one tap away; we propose no friction that traps money, only that the cheaper option comes first and the loss is counted in months, because months are what was spent. Illustrative mock-up.

THE GOAL SERVICE CLOSES THE LOOP

Near the date the saver becomes a spender, the balance becomes the thing to protect, and the correlation flips sign. An account-level rule between two funds BPI already runs moves part of the balance to money market. In 381 five-year stretches of our 36-year history, ₱1,000 a month: worst outcome **₱39,000 → ₱52,000** with the glidepath; stretches ending below ₱60,000 paid in: 11% → 9%; typical cost ₱4,000. One fund price cannot glide to dates its investors do not share, so it sits outside the fund.

HOW WE WOULD KNOW IT WORKED

Metric	Target	Failure
Still contributing in month 60	≥ 55%	< 40%
Kept contributing through the first negative quarter	≥ 80%	< 60%
Pause-to-redeem ratio	≥ 3 : 1	< 1 : 1
Sukli switched on by month 6	≥ 40%	< 15%
Median months funded, year 1	≥ 10 of 12	< 7

What we would refuse to report as success: assets gathered, accounts opened, daily users, app sessions. Each can rise while the thing the fund exists to do is failing.

FIRSTS FUND

FUND FACT SHEET · PROPOSED ACTIVELY MANAGED GLOBAL EQUITY UITF

A FinQuest 2026 proposal, not an existing BPI product · Portfolio as of 2 October 2026 · Page 4 of 6

"Fund your firsts."

FUND OBJECTIVE AND THEME

Objective. Long-term capital growth by investing directly in listed companies around the world that own, operate or supply essential, hard-to-replace capacity: power and water systems, digital networks, ports, airports, hospitals, and the equipment they run on.

How the fund invests, in one line. We identify businesses providing essential capacity, check their financial strength and value, and build a portfolio that balances opportunities with risk. How many companies we hold follows from that process. The fund is **actively managed with diversification and risk controls**; the manager may change holdings and weights within the mandate.

Why it exists. An early-career Filipino earns and saves in pesos, so their future depends on one economy. Firsts Fund would let them own a share of essential businesses around the world from ₱100, in pesos, through a fund that holds the shares directly with a single fee.

Suitable investor. Regular income, a goal at least **five years** away, and the risk tolerance for an equity fund that can fall sharply in a bad year. Not suitable for money needed within five years or for emergency savings.

Separate goal service (proposed platform feature). An authorized account-level glidepath would gradually move part of an investor's Firsts Fund units into a lower-risk fund as their chosen goal approaches, with the investor's permission. It changes only that investor's mix, not how this fund invests. Units are sold at the price of the day, at a gain or a loss, and the goal amount is not guaranteed.

For a regular saver (illustration, not a forecast). ₱1,000 a month for 5 years is ₱60,000 paid in. Across every 5-year stretch from 1990 to 2026 in the industry-level history (381 start months), the typical saver ended with about **₱80,000**. About 1 in 9 stretches ended below ₱60,000; the worst, ending in early 2009, at about ₱39,000. With the proposed glidepath, the worst was about ₱52,000.

Same fee and costs; contributions at the start of each month. It reflects the theme, not our company choices.

KEY FACTS

Structure	Global equity UITF (proposed)
Currency	Philippine peso; daily NAVPU
Horizon	5 years or longer
Risk classification	Aggressive
Minimum (proposed)	₱100 to start and per top-up
Fee (proposed)	1.50% a year
All-in cost (est.)	about 2.1% a year, all costs
Buy or sell (proposed)	Any business day; paid T+5; no exit fee
Holdings	31 listed companies, 14 markets
Cash	About 3%, kept to pay redemptions
Limit per company	20% (BSP rule); largest today 5.8%
Benchmark	NFRA global infrastructure ETF, in pesos
Trustee	BPI Wealth (proposed)

ALLOCATION BY KIND OF CAPACITY

Digital networks	25.00%
Healthcare facilities	22.19%
Power generation & grids	19.22%
Ports	10.04%
Semiconductors	8.13%
Water	7.68%
Grid & power equipment	2.76%
Airports & toll roads	1.98%
Operating cash	3.00%

By listing market

United States	22.96%
Hong Kong / China	10.98%
Saudi Arabia	10.91%
Germany	8.44%
Thailand	7.28%
Japan	5.56%
Malaysia	5.23%
Philippines	4.80%
6 other markets	20.84%

Largest holdings. Exelon 5.8%, Westports 5.2%, ICTSI 4.8%, Engie 4.6%, Bangkok Dusit Medical 4.5%. No company is above 5.8%; all 31 are listed on page 3.

No country quota. Philippine-listed ICTSI is held at 4.80% because it passed the same tests as every other company. Where a company is listed is not always where it earns its revenue.

Shared drivers. About 11% depends on data-centre spending (chips and grid equipment). Digital networks are at the fund's 25% cap per kind of capacity.

PERFORMANCE VS BENCHMARK · PAST RETURNS OF TODAY'S HOLDINGS, IN PESOS · NOT ACTUAL FUND PERFORMANCE

₱100 invested in October 2021 → ₱306 for today's holdings after all costs, vs **₱161** for the benchmark: **25.0% vs 10.0%** a year. **Hindsight: these companies were chosen in October 2026, so this is not a forecast.**

In pesos	2021*	2022	2023	2024	2025	2026*	A year	Volatility	Worst fall
Firsts Fund holdings, after costs	+3.8%	+10.6%	+25.4%	+32.9%	+34.9%	+18.5%	+25.0%	10.2%	−7.4%
Benchmark: NFRA infrastructure ETF	+3.1%	−2.4%	+8.3%	+10.2%	+19.8%	+12.2%	+10.0%	12.4%	−12.6%
World market (MSCI ACWI ETF)	+6.3%	−11.4%	+21.5%	+24.7%	+23.7%	+20.2%	+16.2%	14.8%	−18.2%
Philippine market (PSEi, price only)	+2.7%	−6.8%	+1.7%	+2.8%	−6.3%	−2.0%	−1.7%	13.7%	−21.1%

More risk measures, today's holdings, 5 years: Sharpe ratio 2.00 (benchmark 0.45) · Sortino 3.70 · beta 0.59 to the benchmark, 0.49 to the world market · last 1 year +25.4%, last 3 years +32.6% a year · worst 12 months +4.3%, best +52.7% · **in pesos:** the worst fall on a ₱5,000 balance was ₱372; a bad year like the 36-year worst (−27%) would be ₱1,363.

How to read this. These are past returns of the 31 companies we hold today, after the 1.50% fee, trading costs and dividend taxes; because they were picked knowing how they did, the fund's real results would likely be lower. **Without the 7 chip and grid-equipment companies**, the other 24 returned 18.7% a year (₱100 → ₱237), so the lead over the benchmark does not rest on them alone. **Over the long run:** an industry-level version of the strategy returned 12.0% a year from 1990 to 2026, about the same as the world market (12.2%), with a worst 12 months of −27%. Benchmark and references are ETFs after their own fees. *2021 from 1 Oct; 2026 to 2 Oct.

IMPORTANT. Firsts Fund is a student competition proposal; no such fund exists and nothing here is an offer, solicitation or investment advice. Simulated and historical figures do not represent actual trading. The value of units can fall as well as rise and an investor may get back less than invested. A UITF is not a deposit and is not insured by PDIC.

ALL 31 HOLDINGS · WEIGHTED SO EACH COMPANY ADDS A SIMILAR SHARE OF RISK · AS OF 2 OCTOBER 2026

Holding	Capacity	Weight	% of risk	Holding	Capacity	Weight	% of risk
Exelon	US Power & grids	5.81%	3.9%	Enel	IT Power & grids	2.98%	3.6%
Westports	MY Ports	5.23%	3.8%	Saudi Telecom	SA Digital networks	2.97%	1.9%
ICTSI	PH Ports	4.80%	3.6%	Bharti Airtel	IN Digital networks	2.97%	2.4%
Engie	FR Power & grids	4.57%	3.7%	Deutsche Telekom	DE Digital networks	2.85%	2.4%
Bangkok Dusit Medical	TH Healthcare facilities	4.49%	3.6%	Bumrungrad Hospital	TH Healthcare facilities	2.79%	3.5%
E.ON	DE Power & grids	4.48%	3.7%	Qualcomm	US Semiconductors	2.27%	3.5%
Dr. Sulaiman Al Habib	SA Healthcare facilities	4.41%	3.7%	América Móvil	MX Digital networks	2.01%	2.6%
Guangdong Investment	HK Water	4.36%	3.7%	OMA (airports)	MX Airports & toll roads	1.98%	3.5%
KDDI	JP Digital networks	3.81%	1.8%	Avantest	JP Semiconductors	1.74%	3.4%
Encompass Health	US Healthcare facilities	3.78%	3.8%	HD Hyundai Electric	KR Grid & power equipment	1.65%	3.4%
AT&T	US Digital networks	3.77%	2.3%	NVIDIA	US Semiconductors	1.64%	3.4%
Mouwasat Medical Services	SA Healthcare facilities	3.52%	3.7%	Vistra	US Power & grids	1.38%	3.4%
China Telecom	HK Digital networks	3.33%	2.6%	SK hynix	KR Semiconductors	1.37%	3.4%
Sabesp	BR Water	3.31%	3.6%	Micron	US Semiconductors	1.12%	3.3%
China Mobile	HK Digital networks	3.29%	2.0%	Siemens Energy	DE Grid & power equipment	1.11%	3.4%
HCA Healthcare	US Healthcare facilities	3.19%	3.6%				

Read the risk column, not the weight column. Weights run from 1.1% to 5.8%, but the 23 holdings outside the capped digital networks each carry a similar 3.3%–3.9% of risk: that is the design. NVIDIA gets 1.6% because it swings far more than a hospital operator. The 8 network companies carry less (1.8%–2.6%) because their kind is at the 25% cap. Chips are 8% of the money and 17% of the risk. About 9.4 independent exposures in all. Weights are re-solved quarterly; rejected and watchlisted companies are in the supporting proposal.

HOW WE BUILD THE PORTFOLIO · 140 COMPANIES SCREENED → 31 HELD · SAME PUBLISHED RULES FOR EVERY COMPANY

140

1 · Map the capacity

Up to the 20 largest listed companies (at least US\$1bn) in each of eight kinds of essential capacity, anywhere in the world.

→

129

2 · Check the fit

At least half of revenue from that capacity, positive operating cash flow and a positive return on capital.

→

49

3 · Verify the merit

Survives a debt stress test sized to its industry; debt, value and quality judged against its own peers; tradeable; sound governance. 35 rejected, 45 watchlisted.

→

31

4 · Position the risk

Added in merit order only if it improves diversification; weighted so each adds a similar share of risk. Limits: 20% per company or group, 25% per kind of capacity; about 3% cash. Re-weighted quarterly.

Judgement sits in the published rules, not in picking favourites: a quarterly review may remove a holding for a material event (and logs why), but never resizes one by hand. Thresholds and every company's result are in the supporting proposal.

KEY RISKS		FEES AND CHARGES	
Market	Share prices can fall sharply. In 36 years of industry-level history the worst 12 months lost 27% and the deepest fall was 44%.	Management fee (proposed)	1.50% a year of fund value, accrued daily
Concentration	Digital networks are at the fund's 25% cap; data-centre spending drives about 11% of the fund but more of its past return (memory-chip makers are near a cyclical peak); Saudi Arabia 11% and US health policy about 7%.	Trading costs (modelled)	about 0.21% a year
Currency	About 92% is in foreign currencies and not hedged; a stronger peso lowers returns in pesos.	Dividend withholding (modelled)	about 0.37% a year
Liquidity	Some shares trade less often. Each holding is kept small enough to sell within a week without moving its price much (sized for a ₱1bn fund), and about 3% is kept in cash to pay redemptions.	Subscription / redemption fee	None proposed
Country and regulation	Companies in emerging markets, including some partly owned by governments, face policy and sanctions risk.	Minimum holding period	None proposed; 5 years+ is a recommendation
Selection	Companies are screened with one data provider and thresholds set by the team; the past results shown include hindsight.	Estimated all-in cost	about 2.1% a year
		SUBSCRIPTIONS AND REDEMPTIONS (PROPOSED)	
		Buy units with a one-time amount, a regular monthly plan, or top-ups whenever you like. Sell on any business day at that day's price per unit (NAVPU); the money is paid on day 6, end of day, in line with BPI's peso global equity funds. A missed monthly contribution does not change your goal date and is not taken automatically later.	
		Compared with other products a young Filipino can buy today: see page 1.

Young Filipinos are arriving	18–29 = 26.5% of PSE accounts, from 19.5%; PSE accounts +50.1% in a year	PSE investor profile 2024, via Manila Bulletin (2025)
Access and literacy improved	BPI UITF minimum ₱10,000 → ₱1,000 (2023); 74% answer half the literacy questions, from 69%	BPI Wealth; BSP CFIS 2025
Cash loses in real terms	Inflation 6.2% in July 2026	PSA (2026)
Risk appetite went to crypto	Awareness 20% of adults, from 6%; 46% of owners are 18–34	BSP CFIS 2025; Triple-A
The money moves in wallets	GCash 94M, Maya 50M users; 58% of adults use e-wallets	Company disclosures; BSP via FinQuest primer
Competence, not peers, predicts investing	$\beta = 0.502$ ($p < .001$); peer influence $r = 0.09$ (n.s.)	Susada (2025), $n = 191$
A saver gains from an early fall	Correlation -0.85 paying in, $+0.85$ drawing down	Our test, 20,000 orderings

A2 · WHAT WE KILLED, AND WHY

“The suitability gate is the barrier”	Access demonstrably improved; the claim argued against its own evidence.
“Participation fell 36% → 23%”	Could not be confirmed from BSP releases; not used.
A fixed 30% Philippines sleeve	No basis. Countries are now an outcome of the same tests (ICTSI 4.8%).
A 10% cash reserve	Cost return; about 3% operating cash covers redemptions.
Requiring a dated capacity target	Evidence, not a buy reason; the story never picks a stock.
Referral bounties, streaks, education-gated unlocks	Against the evidence (Susada); a streak you can break is a reason to quit.

A6 · WHAT WOULD CHANGE OUR MIND

The sequence result is arithmetic. But the product case rests on **contribution continuity**, modelled as 60 uninterrupted monthly payments, which no source we found measures for this segment. If continuity is materially worse, the risk level should come down. Sukli exists to raise continuity without relying on discipline, but its uptake and its durability through a fall are unmeasured too. Those are the first two tests we would run with real data, and the honest weak point of this proposal.

A3 · BACK-TEST METHOD AND ITS LIMITS

Method. Weekly peso total returns, 1 Oct 2021 – 2 Oct 2026. Weights re-solved each quarter on the previous 156 weeks only (no look-ahead in the weights), under every limit; 21 rebalances. After the 1.50% fee, 0.30% trading cost and dividend withholding. Benchmark NFRA in pesos.	
Selection is hindsight	Companies chosen in Oct 2026 with Oct 2026 data, priced backwards. Upper bound.
Survivorship	Universe is today's largest companies; failures since 2021 are missing.
One cycle	Chips are 8% of the money but 17% of the risk, near a cyclical peak; without chips and grid equipment, 18.7% a year.
Tax approximation	Today's dividend yields × approximate treaty rates, every year; to be confirmed by counsel.

The first three flatter the figures. None is corrected in the numbers shown; the 36-year industry history is our “what to expect”.

A4 · LIMITS: RULE VS ACTUAL (ALL HOLD AT EVERY REBALANCE)

Limit	Rule	Actual
One company	$\leq 20\%$ (BSP)	5.81%
One group (e.g. Razon)	$\leq 20\%$	4.80%
One kind of capacity	$\leq 25\%$	25.00%
Liquidity	sell in 5 days at 20% of volume	never binds at ₱1bn
Operating cash	about 3%	3.00%
Country quota	none	Philippines 4.80% (3.2%–5.3%)

Concentration, disclosed: about 9.4 independent exposures among 31 holdings; the two largest shared drivers explain 25% of risk. Holdings outside the capped networks each carry 3.3–3.9% of risk.

A5 · REGULATORY POSITION

The fund. A peso UITF holding foreign shares directly, priced daily (NAVPU), with a 20% single-company ceiling per BSP Circular No. 1234 (2026). Our reading, not reviewed by counsel; any launch would need that review first.

Suitability. We are not asking BPI to relax the Client Suitability Assessment, to allow an education-based override, or to sell an aggressive fund to a client rated conservative. We propose recording the investor's horizon and contribution plan in the suitability file, with an audit trail, and letting the goal service carry risk down as the date approaches.

Sukli. Needs itemised, revocable debit authority from the wallet holder, an e-money partner agreement, and treatment of the waiting balance under BSP e-money rules. The design anticipates it: spend-only, balance floor, user cap, one-tap off, and a waiting balance held in a regulated fund rather than a distributor's float.
