FIRSTS FUND

"Fund your firsts."

EXECUTIVE SUMMARY · THE FUND AT A GLANCE

The proposed Firsts Fund is a peso-denominated global equity UITF for graduating students and early-career professionals saving for a meaningful "first" at least five years away, such as taking their parents abroad, a first car, a first home or a first business.

₱100	31	1.50%	5+ years	Pesos
to start and per top-up (proposed)	companies in 14 markets, held directly	a year, one fee (proposed)	recommended horizon, not a lock-in	key numbers shown in pesos, not just %

WHO IT IS FOR

Graduating students to entry-level professionals with regular income, a goal at least five years away, and the risk tolerance for a stock fund. It is not for every beginner: money needed within five years, or emergency savings, belongs in a lower-risk product. People further along in their careers can use it too, as long as their goal is five or more years away.

THE NEED IT ADDRESSES

A young earner's salary, savings and future plans are all in pesos. The products that are easiest to start with are mostly savings or money-market funds, built for short-term goals. Global stock funds are usually reached through funds that hold other funds, with a second layer of fees and a higher minimum. Firsts Fund offers a long-term, global option from ₱100, with one fee, tied to a goal the saver chooses.

HOW THE FUND RUNS, END TO END

1 · Money in	Saver sets a monthly plan or tops up in the BPI App. Money is pooled in one UITF, priced daily per unit (NAVPU).
2 · Choose companies	The M · V · P review (page 5) runs monthly and decides which companies the fund may hold.
3 · Set weights	Weights are reset quarterly so each holding adds a similar share of risk, within the limits.
4 · Keep cash	About 3% stays in cash to pay withdrawals without forced selling.
5 · Money out	Withdraw any business day at that day's price; paid on day 6 (T+5). No exit fee, no lock-in.
6 · Report	In-app progress view, transaction statements, and fund reports at least quarterly.

WHAT A SAVER SEES, IN PESOS

Every key figure is shown in pesos, not only percentages. For example, a fall like the worst 12 months in our 36-year industry history (−27%) on a ₱5,000 balance would be **₱1,363**. Risk is explained clearly before the saver commits, alongside balanced scenarios, without dwelling on the downside.

WHAT THE FUND OWNS

31 listed companies around the world that run essential, hard-to-replace services people use every day: power and water, phone and internet networks, ports, airports, hospitals, and the equipment behind them. Technology exposure is assessed like everything else, not automatically excluded.

Chosen by our M · V · P framework:

M · Map	Find essential-service companies worldwide: **140** screened, **129** fit the theme
V · Verify	Debt stress test, and value and quality against peers: **49** pass
P · Position	Add only what improves diversification, size by risk: **31** held

Same published rules for every company, including the Philippines' ICTSI. Full process on page 5.

25.0% vs 10.0%

a year over the past 5 years: today's holdings (backtested, hindsight) vs the benchmark, NFRA global infrastructure ETF

18.7%	12.0%
holdings without chip and grid-equipment makers, same 5 years	a year over 36 years, industry-level history (context)

How to read these. These are backtested results, not actual fund performance. The companies were picked in 2026 and tested backwards, so 25.0% is a best case, not a forecast. The lower two numbers are checks: the result does not rest on chipmakers, and over 36 years the approach grew about as fast as the world market (12.2%).

HOW IT COMPARES WITH WHAT IS AVAILABLE TODAY

Product	What it is; minimum	Best suited to
Money market fund	Short-term debt; from ₱50	Suited to short-term goals.
Pag-IBIG MP2	Government savings; ₱500	Better for a goal 3–5 years away; we point people there.
Local stock index fund	PSEi shares; ₱1,000	Philippine companies only.
Global fund-of-funds	Owns other funds; ₱1,000	Global, with a second layer of fees.
Firsts Fund (proposed)	31 companies directly; ₱100	Global, in pesos, one fee, every company named.

A comparison of design, not of returns.

Backtests: weekly peso returns after the 1.50% fee, trading costs and dividend taxes. 36-year history: Kenneth French Data Library, in pesos; industry-level context only.

ONE MESSAGE

Fund your firsts.

The central promise is simple: fund a meaningful future first by investing consistently. How the portfolio is built supports that promise in the background; the details live in the fact sheet (pages 4–5) and the annex.

WHO WE TALK TO

Young Filipinos preparing for a meaningful long-term first. We separate a person's **first milestone** from their **first investment**: the fund suits savers with a five-year-plus goal and the appetite for a stock fund, not every beginner.

Meet Bea (illustrative). 23, first job as a junior accountant, takes home about **₱28,000 a month**.

Rent and bills	₱8,000
Food	₱7,000
Helping at home	₱4,000
Transport	₱3,000
Emergency savings	₱2,000
Personal	₱2,000
Her first: Japan with her parents in 5 years	**₱2,000**

HOW WE TALK ABOUT IT

Plain language	No jargon in customer materials. Detailed method stays in the fact sheet and annex.
Concrete, not abstract	“Essential services” explained through real businesses: the power company that keeps the lights on, the port that brings in goods, the hospital down the road.
No safety claims	Never “safe” or “guaranteed”. Five years is a recommended horizon, not a promise of a positive return.
Pesos first	Examples in pesos, supported by percentages where useful.

WHAT PEOPLE SEE

One central story (a relatable person and a concrete first), the goal calculator, and app mock-ups. These are the main visual assets; the numbers and methodology sit in the appendix.

Bea and her budget are illustrative. Calculator growth and inflation rates are example assumptions shown to the user.

THE GOAL CALCULATOR: WHERE EVERY CHANNEL LEADS

Name the first, enter the cost and the date (at least five years away). The calculator shows, with its assumptions on screen:

Contributions only	₱120,000 ÷ 60 months = **₱2,000 a month**. No growth assumed.
With illustrative growth	At an assumed 6% a year, about **₱1,710 a month**. An example, not a promise.
Prices rise (optional)	At 4% a year inflation the trip costs about ₱146,000 by then: ₱2,430 a month, contributions only.

Balanced scenarios before committing. Bea's plan (₱2,000 a month for 5 years, ₱120,000 paid in) across every five-year stretch of our 36-year industry history (381 of them):

Typical outcome	₱160,000
1 in 20 stretches ended at or below	₱110,000
Weakest stretch (ending early 2009)	₱77,000
Weakest, with the goal service (page 3)	₱104,000

Industry-level history, after the fee and costs; illustrative, not a forecast.

WHERE PEOPLE FIND IT

Talks and caravans	On-site financial-literacy talks and campus caravans: the priority channel.
Campus events	Sessions with student organisations, close to graduation.
Early-career workplaces	Financial-wellness sessions at employers, timed with a first job.
Short-form social	Kept lean (paid creator content is costly); creators support, not lead.
BPI App, “Chat with us”	Online visitors can ask a person before starting.

Each channel has one next step: try the goal calculator.

REWARDS AND PROMOS

No raffles or financial rewards in the launch. The fund must be compelling without them; they stay optional future ideas if costs and approvals allow.

WHERE IT LIVES: THE BPI APP

The BPI App is the proposed home for Firsts Fund. Users are already verified there, so opening is a confirmation, not a new application, and pay usually lands in the same bank. All Firsts Fund screens would be new and are labelled as proposed.

SIGN-UP IN FOUR SCREENS

1	Confirm identity from the existing BPI record; the standard suitability questions.
2	Choose one main first: suggested, typed in, or “Help me choose my first”. A first under five years away gets a suggestion of a better-suited option, such as MP2 or a money market fund.
3	See the monthly amount (contributions only, and with illustrative growth) and the risk in pesos.
4	Set the monthly plan: amount and payday. Start from ₱100.

HOW MONEY GOES IN

At launch: a regular monthly plan plus top-ups whenever you like. Either one alone is enough to keep a goal on track.

If a month is missed (not enough money, or skipped), the goal date stays the same unless the user changes it. The app shows the missed amount and the updated projection, and offers three choices: a one-off top-up, a higher amount from now on, or a later goal date. Debits are never raised automatically.

WHAT THE USER SEES

Main screen	Total put in · current value · gain or loss in pesos · progress to the goal
Details	Units held, price per unit, every transaction
Reminders	Payday and the goal date, never daily price moves
Reports	In-app progress view; transaction statements; fund reports at least quarterly

No streaks or counters that reset: missing a month should never feel like losing.

HOW WE WOULD KNOW IT WORKED

Measure	Target	Rethink if
Still contributing in month 60	≥ 55%	< 40%
Kept contributing through the first losing quarter	≥ 80%	< 60%
Chose “pause” over “withdraw”	≥ 3 to 1	< 1 to 1
Months contributed in year 1 (median)	≥ 10 of 12	< 7
Reached a first and set a new one	tracked	

Not counted as success: money gathered, accounts opened or app visits. Each can rise while people quietly stop saving.

THE GOAL SERVICE (PROPOSED): WHY AND HOW

Why. Early on, a fall gives a saver time to recover. Close to the goal date there is no time left, so a bad year then can shrink the goal. The fund itself cannot slow down for one person, because everyone in it has a different date.

How. The change happens in the user's own account, not in the fund. Every year the app runs a goal review; two years before the date it sends an extra reminder. The user can then choose to move part of their units into a lower-risk BPI fund. **Nothing moves without their say-so**, and it reduces risk without guaranteeing the goal.

What it can do (Bea's plan, 36-year history, illustrative): the worst five-year stretch improves from ₱77,000 to ₱104,000; the typical outcome is a little lower (₱152,000 vs ₱160,000), the price of less risk. A move to another fund is a future capability that still needs operational checks.

BEFORE SOMEONE WITHDRAWS

WITHDRAW · CONFIRM (proposed screen, example numbers)

₱26,500

You have put in ₱28,000 over 14 months; it is worth ₱26,500 today. You are ₱93,500 from your first: Japan with your parents, October 2031.

Markets are down right now. If you keep saving, you are buying units at a lower price.

[Pause the plan for 3 months] Withdraw ₱26,500

Pausing comes first on screen; withdrawing is still one tap away. No holding period, no exit fee, nothing locked in.

REACHING A FIRST, THEN THE NEXT

When the goal is reached the user can withdraw, or keep the balance invested and name the next first, without starting over. The app suggests a next first at that moment, because there will always be one.

LATER: FUTURE ENHANCEMENTS

Sukli round-ups	Spare change from purchases set aside and invested at ₱100. Starts inside the BPI App to test it, before any e-wallet. Needs consent, spending rules and a waiting account to be settled first.
Several firsts at once	More than one goal per user, each with its own date and plan.
Rewards	Only if the costs and approvals work; the fund must stand without them.

Screens and numbers on this page are proposed and illustrative. Measures and targets are the team's own, to be tested with real data.

FUND OBJECTIVE AND THEME

Objective. Long-term capital growth by investing directly in listed companies around the world that own, operate or supply essential, hard-to-replace capacity: power and water systems, digital networks, ports, airports, hospitals, and the equipment they run on.

How the fund invests, in one line. We identify businesses providing essential capacity, check their financial strength and value, and build a portfolio that balances opportunities with risk. How many companies we hold follows from that process. The fund is **actively managed with diversification and risk controls**; the manager may change holdings and weights within the mandate.

Why it exists. An early-career Filipino earns and saves in pesos, so their future depends on one economy. Firsts Fund would let them own a share of essential businesses around the world from ₱100, in pesos, through a fund that holds the shares directly with a single fee.

Suitable investor. Regular income, a goal at least **five years** away, and the risk tolerance for an equity fund that can fall sharply in a bad year. Not suitable for money needed within five years or for emergency savings.

Goal service (proposed, in the investor's own account). Close to a goal date there is little time to recover from a fall. A yearly goal review, plus a reminder two years before the date, lets the investor choose to move part of their units to a lower-risk fund. Nothing moves without their permission; it changes only their account, not how this fund invests; units are sold at that day's price, and the goal is not guaranteed.

For a regular saver (illustration, not a forecast). ₱1,000 a month for 5 years is ₱60,000 paid in. Across every 5-year stretch from 1990 to 2026 in the industry-level history (381 start months), the typical saver ended with about **₱80,000**. About 1 in 9 stretches ended below ₱60,000; the worst, ending in early 2009, at about ₱39,000. With the proposed goal service, the worst was about ₱52,000.

Same fee and costs; contributions at the start of each month. It reflects the theme, not our company choices.

KEY FACTS

Structure	Global equity UITF (proposed)
Currency	Philippine peso; daily NAVPU
Horizon	5 years or longer
Risk classification	Aggressive
Minimum (proposed)	₱100 to start and per top-up
Fee (proposed)	1.50% a year
All-in cost (est.)	about 2.1% a year, all costs
Buy or sell (proposed)	Any business day; paid T+5; no exit fee
Holdings	31 listed companies, 14 markets
Cash	About 3%, kept to pay redemptions
Limit per company	20% (BSP rule); largest today 5.8%
Benchmark	NFRA global infrastructure ETF, in pesos
Reviews	Holdings monthly; weights quarterly
Trustee	BPI Wealth (proposed)

ALLOCATION BY KIND OF CAPACITY

Digital networks	25.00%
Healthcare facilities	22.19%
Power generation & grids	19.22%
Ports	10.04%
Semiconductors	8.13%
Water	7.68%
Grid & power equipment	2.76%
Airports & toll roads	1.98%
Operating cash	3.00%

By listing market	
United States	22.96%
Hong Kong / China	10.98%
Saudi Arabia	10.91%
Germany	8.44%
Thailand	7.28%
Japan	5.56%
Malaysia	5.23%
Philippines	4.80%
6 other markets	20.84%

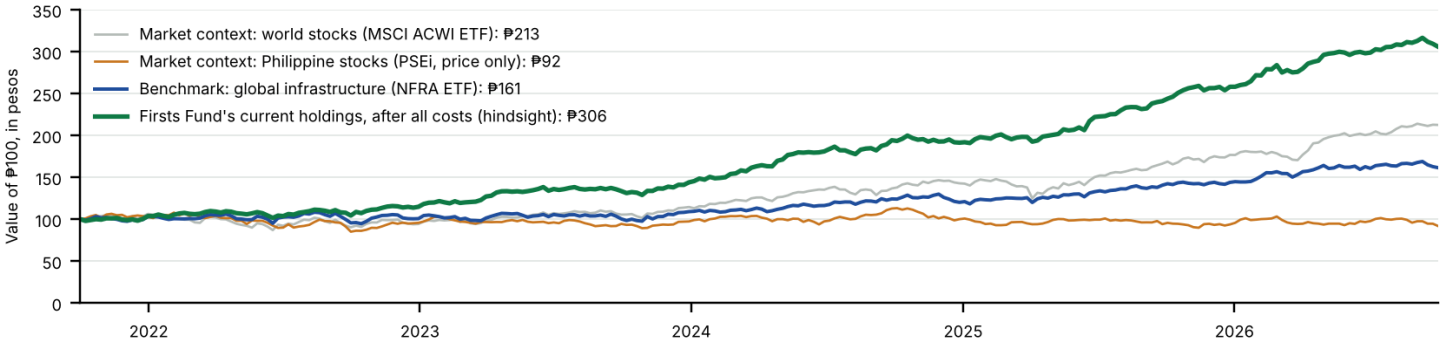

Largest holdings. Exelon 5.8%, Westports 5.2%, ICTSI 4.8%, Engie 4.6%, Bangkok Dusit Medical 4.5%. No company is above 5.8%; all 31 are listed on page 5.

No country quota. Philippine-listed ICTSI is held at 4.80% because it passed the same tests as every other company. Where a company is listed is not always where it earns its revenue.

Shared drivers. About 11% depends on data-centre spending (chips and grid equipment). Digital networks are at the fund's 25% cap per kind of capacity.

PERFORMANCE VS BENCHMARK · PAST RETURNS OF TODAY'S HOLDINGS, IN PESOS · NOT ACTUAL FUND PERFORMANCE

₱100 invested in October 2021 → ₱306 for today's holdings after all costs, vs **₱161** for the benchmark: **25.0%** vs **10.0%** a year. **Hindsight:** these companies were chosen in October 2026, so this is not a forecast.

In pesos	2021*	2022	2023	2024	2025	2026*	A year	Volatility	Worst fall
Firsts Fund holdings, after costs	**+3.8%**	**+10.6%**	**+25.4%**	**+32.9%**	**+34.9%**	**+18.5%**	**+25.0%**	**10.2%**	**−7.4%**
Benchmark: NFRA infrastructure ETF	+3.1%	−2.4%	+8.3%	+10.2%	+19.8%	+12.2%	+10.0%	12.4%	−12.6%
Market context: world (MSCI ACWI ETF)	+6.3%	−11.4%	+21.5%	+24.7%	+23.7%	+20.2%	+16.2%	14.8%	−18.2%
Market context: Philippines (PSEi)	+2.7%	−6.8%	+1.7%	+2.8%	−6.3%	−2.0%	−1.7%	13.7%	−21.1%

Also, today's holdings over 5 years: last year +25.4%; last 3 years +32.6% a year · worst 12 months +4.3%, best +52.7% · return for each unit of ups and downs (Sharpe ratio) 2.00 vs 0.45 for the benchmark · moved about 0.59× as much as the benchmark (beta). **In pesos:** the deepest drop on a ₱5,000 balance was ₱372; a bad year like the 36-year worst (−27%) would be ₱1,363.

How to read this. These are past returns of the 31 companies we hold today, after the 1.50% fee, trading costs and dividend taxes; because they were picked knowing how they did, the fund's real results would likely be lower. **Without the 7 chip and grid-equipment companies**, the other 24 returned 18.7% a year (₱100 → ₱237), so the lead over the benchmark does not rest on them alone. **Over the long run:** an industry-level version of the strategy returned 12.0% a year from 1990 to 2026, about the same as the world market (12.2%), with a worst 12 months of −27%. Benchmark and references are ETFs after their own fees. *2021 from 1 Oct; 2026 to 2 Oct.

IMPORTANT. Firsts Fund is a student competition proposal; no such fund exists and nothing here is an offer, solicitation or investment advice. Simulated and historical figures do not represent actual trading. The value of units can fall as well as rise and an investor may get back less than invested. A UITF is not a deposit and is not insured by PDIC.

ALL 31 HOLDINGS · WEIGHTED SO EACH COMPANY ADDS A SIMILAR SHARE OF RISK · AS OF 2 OCTOBER 2026

Holding		Capacity	Weight	% of risk
Exelon	US	Power & grids	5.81%	3.9%
Westports	MY	Ports	5.23%	3.8%
ICTSI	PH	Ports	4.80%	3.6%
Engie	FR	Power & grids	4.57%	3.7%
Bangkok Dusit Medical	TH	Healthcare facilities	4.49%	3.6%
E.ON	DE	Power & grids	4.48%	3.7%
Dr. Sulaiman Al Habib	SA	Healthcare facilities	4.41%	3.7%
Guangdong Investment	HK	Water	4.36%	3.7%
KDDI	JP	Digital networks	3.81%	1.8%
Encompass Health	US	Healthcare facilities	3.78%	3.8%
AT&T	US	Digital networks	3.77%	2.3%
Mouwasat Medical Services	SA	Healthcare facilities	3.52%	3.7%
China Telecom	HK	Digital networks	3.33%	2.6%
Sabesp	BR	Water	3.31%	3.6%
China Mobile	HK	Digital networks	3.29%	2.0%
HCA Healthcare	US	Healthcare facilities	3.19%	3.6%

Holding		Capacity	Weight	% of risk
Enel	IT	Power & grids	2.98%	3.6%
Saudi Telecom	SA	Digital networks	2.97%	1.9%
Bharti Airtel	IN	Digital networks	2.97%	2.4%
Deutsche Telekom	DE	Digital networks	2.85%	2.4%
Bumrungrad Hospital	TH	Healthcare facilities	2.79%	3.5%
Qualcomm	US	Semiconductors	2.27%	3.5%
América Móvil	MX	Digital networks	2.01%	2.6%
OMA (airports)	MX	Airports & toll roads	1.98%	3.5%
Advantest	JP	Semiconductors	1.74%	3.4%
HD Hyundai Electric	KR	Grid & power equipment	1.65%	3.4%
NVIDIA	US	Semiconductors	1.64%	3.4%
Vistra	US	Power & grids	1.38%	3.4%
SK hynix	KR	Semiconductors	1.37%	3.4%
Micron	US	Semiconductors	1.12%	3.3%
Siemens Energy	DE	Grid & power equipment	1.11%	3.4%

Read the risk column, not the weight column. Weights run from 1.1% to 5.8%, but the 23 holdings outside the capped digital networks each carry a similar 3.3%–3.9% of risk: that is the design. NVIDIA gets 1.6% because it swings far more than a hospital operator. The 8 network companies carry less (1.8%–2.6%) because their kind is at the 25% cap. Chips are 8% of the money and 17% of the risk. Together they behave like about 9 independent groups. Weights are reset quarterly; companies we rejected or are watching are in the supporting proposal.

M · V · P: HOW WE BUILD THE PORTFOLIO · 140 COMPANIES SCREENED → 31 HELD · THE SAME PUBLISHED RULES FOR EVERY COMPANY

M — Map the capacity

Find the companies that own, run or supply essential services: up to the 20 largest listed in each of eight kinds, anywhere in the world, each worth at least US$1 billion (about ₱62 billion) on the stock market. Keep those that earn at least half their revenue from that service and generate cash.

140 → 129
140 screened · 129 fit the theme

→

V — Verify the merit

Check each company is a sound investment: survives a debt stress test sized to its industry, and compares well with its own peers on price and quality; tradeable; sound governance.

129 → 49
49 eligible · 35 rejected · 45 on watch

→

P — Position the risk

Add eligible companies in merit order, only if each one improves diversification. Size them so every holding adds a similar share of risk, within limits: 20% per company or group, 25% per kind of service, about 3% cash.

49 → 31
31 held · 18 on watch (added too little diversification)

Judgement sits in the published rules, not in picking favourites. Holdings are reviewed monthly and may be removed after a material event (with the reason logged), but are never resized by hand; weights are reset quarterly. Every company's result is in the supporting proposal.

KEY RISKS

Market	Share prices can fall sharply. In 36 years of industry-level history the worst 12 months lost 27% and the deepest fall was 44%.
Concentration	Digital networks are at the fund's 25% cap; data-centre spending drives about 11% of the fund but more of its past return (memory-chip makers are near a cyclical peak); Saudi Arabia 11% and US health policy about 7%.
Currency	About 92% is in foreign currencies and not hedged; a stronger peso lowers returns in pesos.
Liquidity	Each holding is kept small enough to sell within a week without moving its price much (sized for a ₱1bn fund), and about 3% is kept in cash. Many goals may fall due on the same dates (for example December); the manager sees goal dates in advance and can raise cash early.
Country and regulation	Companies in emerging markets, including some partly owned by governments, face policy and sanctions risk.
Selection	Companies are screened with one data provider and thresholds set by the team; the past results shown include hindsight.

FEES AND CHARGES

Management fee (proposed)	1.50% a year of fund value, accrued daily
Trading costs (modelled)	about 0.21% a year
Dividend withholding (modelled)	about 0.37% a year
Subscription / redemption fee	None proposed
Minimum holding period	None proposed; 5 years+ is a recommendation
Estimated all-in cost	**about 2.1% a year**

SUBSCRIPTIONS AND REDEMPTIONS (PROPOSED)

Buy units with a one-time amount, a regular monthly plan, or top-ups whenever you like. Sell on any business day at that day's price per unit (NAVPU); the money is paid on day 6, end of day, in line with BPI's peso global equity funds. A missed monthly contribution does not change your goal date and is not taken automatically later.

Compared with other products a young Filipino can buy today: see page 1.

Sources. Company data: stockanalysis.com (S&P Global Market Intelligence), 8 Oct 2026. Prices: Yahoo Finance total returns and PSE Edge (with cash dividends), converted to pesos weekly. Benchmark: FlexShares STOXX Global Broad Infrastructure Index Fund (NFRA), Yahoo Finance adjusted close in pesos; cross-check iShares Global Infrastructure ETF (IGF) returned 13.7% a year. Cash: BSP policy rate minus 0.50 pt. Industry-level history: Kenneth French Data Library and BIS exchange rates. Single-company limit: BSP Circular No. 1234, Series of 2026 (20 May 2026), a 20% ceiling, not a target. Comparison funds: BPI Wealth fund pages and Pag-IBIG. Industry classifications assigned by the team. Dividend tax rates approximate, to be confirmed.

Team Los Angeles 76ers, Ateneo de Manila University: Prince Angelo C. Rivera · Luis Tengonciang · Karol Josef Fuñe · Eric Fabian Thirdy Mendez.

A1 · WHAT CHANGED AFTER THE BPI CONSULTATIONS

Horizon	Five years or longer throughout; a recommendation, not a lock-in or a promise of returns.
Theme	No blanket "non-tech" claim; essential services and infrastructure, with technology exposure assessed.
Selection	M · V · P kept; how many companies are held now follows from the rules (31), not a fixed number.
Philippine share	The fixed 30% Philippines / 70% global split was dropped; countries follow from the same tests.
Benchmark	NFRA global infrastructure ETF in pesos; world and Philippine indices shown as market context only.
Performance	Labelled as backtested, never as actual fund results; calendar years and balanced risk shown.
Persona and goals	Early-career saver; one main first; "Help me choose my first"; several firsts later.
Calculator	Contributions-only plus an illustrative scenario, optional inflation, assumptions visible.
Contributions	Monthly plan plus top-ups at launch; Sukli a future enhancement, starting in the BPI App.
Missed months	Goal date unchanged; user chooses a top-up, a higher amount or a later date; no automatic increase.
Dashboard	Contributions, value, gain or loss, goal progress; no streaks.
Risk messaging	No "bad year first" step; clear risk information before committing, balanced scenarios.
Goal service	Account-level, explained simply; yearly review and a reminder two years before; the user decides.
Marketing	One message, "Fund your firsts"; talks, caravans, campus and workplaces first; no raffles at launch.
Structure and platform	A peso global UITF; the BPI App as the proposed entry point; new screens labelled proposed.

A2 · STILL TO BE VALIDATED

Goal service	Moving units to a lower-risk fund for one saver needs operational checks; it is not promised as automatic.
Sukli	Which purchases count, consent, where spare change waits, and when it moves; BPI App first.
Running costs	Custody, currency and audit costs of holding foreign shares directly; the fund needs seed money and a minimum size.
Dividend taxes	Rates are approximate; to be confirmed by a tax adviser.
Staying power	How many savers keep contributing through a losing year; the first thing to test with real data.

A3 · BACK-TEST METHOD AND ITS LIMITS

Method. Weekly peso returns including dividends, 1 Oct 2021 – 2 Oct 2026. Each quarter, weights were set using only the previous three years of prices, under every limit (21 times). After the 1.50% fee, 0.30% trading cost and dividend taxes. Benchmark NFRA, in pesos.

Selection is hindsight	Companies chosen in Oct 2026 with Oct 2026 data, priced backwards. Upper bound.
Survivorship	Universe is today's largest companies; failures since 2021 are missing.
One cycle	Chips are 8% of the money but 17% of the risk, near a cyclical peak; without chips and grid equipment, 18.7% a year.
Tax estimate	Dividend tax rates are approximate; to be confirmed by a tax adviser.

The first three make the figures look better than reality. We do not adjust for them; the 36-year industry history is our "what to expect". Withdrawals and goal-service moves are ordinary sales of units, paid from cash first and then by selling shares, at the 0.30% trading cost.

A4 · LIMITS: RULE VS TODAY (ALL MET AT EVERY QUARTERLY RESET)

Limit	Rule	Actual
One company	≤ 20% (BSP)	5.81%
One group (e.g. Razon)	≤ 20%	4.80%
One kind of capacity	≤ 25%	25.00%
Liquidity	sell in 5 days at 20% of volume	never binds at ₱1bn
Operating cash	about 3%	3.00%
Country quota	none	Philippines 4.80% (3.2%–5.3%)

Concentration, disclosed: the 31 holdings behave like about 9 independent groups; the two biggest common influences explain 25% of the ups and downs. Holdings outside the capped networks each carry 3.3–3.9% of the risk.

A5 · REGULATORY POSITION

The fund. A peso UITF holding foreign shares directly, priced daily (NAVPU), with a 20% single-company ceiling per BSP Circular No. 1234 (2026). Our reading, not reviewed by counsel; any launch would need that review first.

Suitability. The standard BPI suitability assessment applies unchanged. The saver's goal and date are recorded with their plan; goals under five years are pointed to lower-risk options.

Sukli (future). Starts inside the BPI App. Needs clear, revocable consent, rules on which purchases count, and a regulated place for spare change to wait before it is invested; e-wallets only after that works and partner agreements exist.

Reports. Separate in-app progress view, transaction statements, and fund disclosures, with fund reports at least quarterly.

Team Los Angeles 76ers, Ateneo de Manila University: Prince Angelo C. Rivera · Luis Tengonciang · Karol Josef Fuñe · Eric Fabian Thirdy Mendez.

A FinQuest 2026 proposal; not an offer, solicitation or investment advice, and not a BPI Wealth product.
